To support immune health, we all must take particular care to sustain our optimal nutritional status. Maintaining vitamin D levels may help to support proper immune function, while supplementing with vitamin C and zinc helps to promote immune response. In addition, probiotic supplementation has been associated with healthy respiratory function.†

Genestra Brands provides vitamins, minerals, probiotics and herbal formulations in a variety of formats.
**Cor Defense**

**Immune support formula**

- Helps to maintain immune function
- Promotes normal nasal function and immune cell activity
- Provides 500 mg of bakers yeast (EpiCor®) per dose
- Also includes vitamin D, zinc, vitamins C and D, and European elderberry flower extract

Cor Defense contains EpiCor®, a proprietary and research-driven extract from *Saccharomyces cerevisiae* yeast designed to maintain immune function. Research demonstrates that daily supplementation with 500 mg of EpiCor® promotes mucosal immunity and regulates the infiltration of immune cells into the respiratory tract, which supports normal nasal function. Zinc further helps to maintain immune function by stimulating the production of lymphocytes and by increasing their phagocytic activity. Cor Defense also includes vitamin D, the antioxidant vitamin C and European elderberry flower extract for additional immune health support.

**C1000**

**High-dose vitamin C and flavonoid combination**

- Supports immune function
- Promotes antioxidant support
- Provides 1000 mg of vitamin C per tablet, plus rose hips, hesperidin, quercetin and rutin

C1000 is a combination of vitamin C and a wide range of bioflavonoids that promotes immune health and antioxidant support. Vitamin C stimulates the immune system, resulting in increased T cell proliferation and neutrophil movement. Research demonstrates that intracellular vitamin C levels in leukocytes decrease naturally with age, which is associated with impaired neutrophil activity. However, supplementation with vitamin C in elderly adults may promote phagocytosis in neutrophils and support antibody-mediated immune responses. Recent research suggests that smokers and elite athletes may experience the greatest benefit of vitamin C supplementation due to its potent antioxidant effects. As the body does not store vitamin C, continuous intake is required.

D-Mulsion 400 and 1000
Lemon or Natural Spearmint Flavors

Emulsified vitamin D supplement

- Supports immune health
- Great-tasting lemon and spearmint flavors (D-Mulsion 1000 only)

D-Mulsion 400 and 1000 provide vitamin D using an emulsification process for enhanced bioavailability and improved palatability. The vitamin D receptor is found on most immune cells, including T cells, B cells, and macrophages, demonstrating an important interaction between vitamin D and the immune system. Low vitamin D status has been associated with decreased upper respiratory immune function, while vitamin D supplementation has been shown to have beneficial effects on the function of a variety of immune cells. Research demonstrates that vitamin D mediates the proliferation of T and B cells, increases the phagocytic activity of macrophages, and promotes a healthy cytokine balance. D-Mulsion 400 and 1000 are good alternatives for individuals who have difficulty swallowing capsules.

### D3 1000

**Vitamin D in capsule format**

- Supports immune health
- Provides 1000 IU of vitamin D per capsule

D3 1000 provides 1000 IU of vitamin D in a vegetable capsule format. Vitamin D synthesis in the skin can be altered by skin pigmentation, clothing, latitude, and sunscreen use. Vitamin D levels also vary depending on the season, with highest levels present during summer and lowest levels present during winter; this pattern also resembles the seasonal variation in immune system health. Low vitamin D status has been associated with decreased upper respiratory immune function, although vitamin D supplementation has been shown to have beneficial effects on the function of a variety of immune cells. In a recent controlled clinical trial involving children, daily supplementation with 1,000 IU of vitamin D for 3 months was shown to significantly increase plasma vitamin D levels and promote a healthy cytokine balance. Following supplementation, levels of the cytokines IL-2, IL-4, IL-6, and IFN-γ were all significantly modified.

D₃ 1000 Chewable
Natural Blackcurrant Flavor

**Chewable vitamin D supplement**
- Supports immune health
- Provides 1,000 IU of vitamin D per chewable tablet
- Great-tasting natural blackcurrant flavor

D₃ 1000 Chewable provides 1,000 IU of vitamin D in a delicious natural blackcurrant-flavored chewable tablet. Recent research has demonstrated an important interaction between vitamin D and the immune system. Vitamin D levels vary depending on the season, with highest levels present during summer and lowest levels present during winter; this pattern also resembles the seasonal variation in immune system health. Low vitamin D status has also been associated with decreased upper respiratory immune function, while vitamin D supplementation has been shown to have beneficial effects on the function of a variety of immune cells – including dendritic cells, macrophages, and T cells. In a recent controlled clinical trial involving children, daily supplementation with 1,000 IU of vitamin D for 3 months was shown to significantly increase plasma vitamin D levels and promote a healthy cytokine balance. Following supplementation, levels of the cytokines IL-2, IL-4, IL-6, and IFN-γ were all significantly modified.

D₃ 1000 Drops
Vitamin D in a convenient liquid drop format

- Supports immune health
- Provides 1,000 IU of vitamin D per drop

D₃ 1000 Drops come in a convenient, easy-to-use liquid drop format – just one drop contains 1,000 IU of vitamin D. D₃ 1000 Drops can be dropped directly into the mouth or mixed into drinks, and are good alternatives for individuals who have difficulty swallowing capsules. Recent research demonstrates that low vitamin D status is associated with decreased upper respiratory immune function, while vitamin D supplementation has been shown to have beneficial effects on the function of a variety of immune cells, including dendritic cells, macrophages, and T cells. Research demonstrates that vitamin D mediates the proliferation of T and B cells, increases the phagocytic activity of macrophages, and promotes a healthy cytokine balance to support normal immune function.

Scorbatate

**Multi-mineral formula with vitamin C**
- Supports immune health
- Provides antioxidant support

Scorbatate is a multi-mineral formula that supports immune health with a unique combination of zinc and vitamin C. Zinc is essential to maintaining immune health as it stimulates cell division in lymphocytes and increases their phagocytic activity. As a cofactor for thymulin, a hormone involved in T cell differentiation and function, zinc is especially necessary for T cell proliferation in the thymus. Recent research has shown that low levels of zinc lead to decreased immune cell number and function, including a reduced synthesis of cytokines. Low levels of zinc are commonly found in vegetarians, the elderly, and pregnant or nursing women due to reduced absorption, insufficient intake in the diet, and increased zinc requirement, respectively. Similarly, the elderly tend to have low levels of vitamin C. The antioxidant vitamin C also stimulates the immune system, resulting in increased T cell proliferation and neutrophil movement. As the body does not store zinc or vitamin C, continuous intake is required.

TIM

**Multi-vitamin and glandular formula**
- Supports immune health
- Provides 2,250 mcg of vitamin A and 34 mg of vitamin E per dose
- Includes 100 mg of vitamin C and 10 mg of zinc per dose

TIM is a multi-vitamin supplement that also contains glandular extracts, including spleen, thymus, and bone marrow. Vitamin A helps maintain immune function by stimulating the development of lymphocytes, including natural killer and T and B cells. Zinc further contributes to maintaining immune health by stimulating cell division in lymphocytes and increasing their phagocytic activity. Recent research has shown that low levels of zinc are associated with decreased immune cell number and function, including a reduced synthesis of cytokines. TIM also provides vitamins C and E, the most important antioxidants in aqueous and lipid compartments of the body, respectively. In addition to recycling the stable vitamin E radical, vitamin C also stimulates the immune system, resulting in increased T cell proliferation and neutrophil movement.

Zinc Glycinate Liquid
Natural Peach-Tangerine Flavor

Great-tasting, bioavailable liquid zinc formula
• Provides 30 mg of zinc bisglycinate per teaspoon to contribute to daily zinc requirements
• Helps to maintain immune function and skin health
• Delicious natural peach-tangerine flavor

Zinc Glycinate Liquid is a great-tasting mineral formula that provides zinc in the bioavailable form of zinc bisglycinate. Zinc is an important trace element in the body. It plays a key role in maintaining immune health by stimulating the production of immune cells, regulating natural killer cell activity and mediating cytokine production. Clinical research has demonstrated that daily supplementation with 30 mg of zinc bisglycinate for up to four days helped to maintain immune function in the airways of children. Zinc also has a long history of use in dermatological health. It helps to maintain immune function in the skin, while promoting collagen synthesis to help maintain skin structure. Zinc Glycinate Liquid provides a bioavailable source of zinc to help meet daily zinc requirements. In one randomized crossover trial, zinc bisglycinate was demonstrated to have 43% higher bioavailability than zinc gluconate.

HMF Baby B

Support for breast-fed babies

• Promotes immune and skin health
• Helps to reduce incidence of skin sensitivity
• Provides 10 billion CFU per day
• Safe for use during infancy

HMF Baby B probiotic formula for infants provides a combination of four proprietary, human-sourced probiotic strains, which help to promote normal immune function and skin health in infants. Human Microflora (HMF) probiotics exhibit strong epithelial adherence and a naturally high tolerance to stomach acid. HMF Baby B powder dissolves easily into milk or water, is free of gluten and soy, and is ideal for vegetarian infants. HMF Baby B’s probiotics have been clinically tested to ensure both safety and efficacy.

HMF Baby F

Support for formula-fed babies

• Promotes immune and skin health
• Helps to reduce incidence of skin sensitivity
• Provides 10 billion CFU per day
• Safe for use during infancy

HMF Baby F is a probiotic supplement for formula-fed babies that provides a combination of four proprietary, human-sourced probiotic strains, which help to promote normal immune function and skin health. HMF Baby F also contains galactooligosaccharides (GOS), a type of prebiotic fiber found naturally within breast milk that may help to support a healthy gastrointestinal microflora. Fructooligosaccharides (FOS) are included for additional prebiotic fiber content. Human Microflora (HMF) probiotics exhibit strong epithelial adherence and a naturally high tolerance to stomach acid. HMF Baby F powder dissolves easily into milk or water, is free of gluten and soy, and is ideal for vegetarians. HMF Baby F’s probiotics have been clinically tested to ensure both safety and efficacy.

HMF Fit for School
Natural Blackcurrant Flavor

Children’s immune support formula‡
- Supports upper respiratory tract health†
- May help promote immune function in children‡
- Includes 12.5 billion CFU of proprietary probiotic strains per day
- Provides 50 mg of vitamin C and 1,000 IU of vitamin D per serving per day
- Chewable tablets with a delicious natural blackcurrant flavor

HMF Fit for School includes a combination of research-driven probiotic strains and vitamin C that helps to support upper respiratory tract health and immune function in children. In a recent clinical trial, 57 schoolchildren were randomized to receive either a placebo tablet or HMF Fit for School’s probiotic formula plus 50 mg of vitamin C daily for six months. Children in the probiotic plus vitamin C group had a significant improvement in upper respiratory immune health. Supplementation helped moderate cytokine levels, including interferon gamma (IFN-γ). These results are consistent with other studies that have found that Lactobacillus acidophilus and Bifidobacterium animalis subsp. lactis help maintain upper respiratory tract health. HMF Fit for School also includes additional support for immune health with 1,000 IU of vitamin D per serving.

NEW HMF Immune
Natural Blackcurrant Flavor

Great-tasting upper respiratory support formula‡
- Supports upper respiratory tract health in children and physically active adults†
- Offers 30 billion CFU per dose from a combination of five proprietary strains, plus vitamins C and D
- Once-daily chewable tablet available in a delicious natural blackcurrant flavor

HMF Immune combines proprietary probiotics with vitamins C and D to provide targeted support for the immune system. Each convenient, once-daily chewable tablet provides a blend of five research-driven probiotic strains from both the Lactobacillus and Bifidobacterium genera. As nearly 80% of the body’s immunologically active cells are located in gut-associated lymphoid tissue, an important connection has been demonstrated between the intestines and the immune system. In addition to supporting gastrointestinal health, HMF Immune provides BI-04, a strain that has been shown in a clinical trial to support upper respiratory tract health in physically active adults. Similarly, it offers CUL-60, CUL-21, CUL-34 and CUL-20, which were demonstrated in a clinical trial to support upper respiratory tract health in children when combined with vitamin C. To further help maintain immune function, HMF Immune contains vitamins C and D. Vitamin C supports the immune system by regulating lymphocyte proliferation, natural killer cell activity and immunoglobulin production, while vitamin D helps control T cell activation, cytokine release and phagocytosis in macrophages. Research demonstrates that vitamins C and D may be especially effective in maintaining immune function in the respiratory tract.

HMF Intensive

Clinically researched probiotic formula

- Provides 25 billion CFU per capsule
- Balances microflora composition
- Supports gastrointestinal health and comfort

HMF Intensive provides a combination of probiotics clinically demonstrated to support gastrointestinal health and comfort. Clinical trials have found that daily supplementation with HMF Intensive’s probiotic formula helped support a healthy microflora composition. Additionally, a clinical trial reported that daily supplementation with this probiotic formula for eight weeks significantly improved several measures of intestinal comfort (including symptom severity score, abdominal comfort, bloating, satisfaction with bowel habits, and quality of life). Specifically, probiotic intake led to a 22% decrease in days with intestinal discomfort, 32% improvement in satisfaction with bowel habits, and 30% improvement in quality of life scores. When compared to placebo values, satisfaction with bowel habits and mean change in symptom severity score significantly improved after six weeks.

HMF Travel

Probiotics to support gastrointestinal health when travelling

- Shelf-stable formula
- 35 billion CFU per day
- Provides maintenance of a healthy gastrointestinal microflora
- Includes Saccharomyces boulardii plus four proprietary probiotic strains

HMF Travel combines five probiotic strains from Lactobacillus, Bifidobacterium and Saccharomyces genera to promote a healthy gut flora and support gastrointestinal health. A number of travel-related factors, including unfamiliar food or water, stress and jet-lag, can all affect the normal composition of gut bacteria. Clinical trials have found that the probiotic yeast Saccharomyces boulardii helps support a healthy gastrointestinal microflora and support gastrointestinal health in tourists when taken prior to and during the trip. HMF Travel also contains proprietary, human-sourced, research-driven strains demonstrated to promote gastrointestinal comfort, maintain immune health (when combined with vitamin C), adhere to the gut lining, efficiently colonize the intestinal environment, and naturally resist pH and bile acid without the need for enteric coating. As some probiotic supplements require constant refrigeration to ensure the stability of the microorganisms, they may be unsuitable for travelers that do not have easy access to refrigeration. HMF Travel is a shelf-stable probiotic supplement offered in a convenient capsule format that can easily be taken anywhere to support gastrointestinal health.

Astragalus Tincture

Astragalus formula for immune support‡

- Offers traditional support for maintaining ch’i and healthy immune and digestive function‡
- Provides 1.5 ml of astragalus root extract per serving (1:4; 375 mg dried equivalent)

Astragalus Tincture provides an extract of astragalus root, an herb with a long history of traditional use. Astragalus root has been used for more than 2,000 years in China and was included in Shen Nong’s Materia Medica, written during the Han dynasty (206 BC–220 AD). Astragalus provides traditional support for maintaining ch’i and healthy immune and digestive function. Astragalus Tincture is ideal for vegans and individuals with sensitivities to dairy.‡

NEW English Ivy
Natural Raspberry Flavor

Herbal combination supporting upper respiratory immune health‡
- Includes a soothing blend of English ivy, marshmallow and European elder extracts
- Supports upper respiratory health and function‡
- Promotes oropharyngeal mucosal health and comfort‡
- Delicious natural raspberry flavor
- Convenient liquid formula suitable for the entire family

English Ivy Syrup is a great-tasting combination of herbs traditionally used to support upper respiratory and immune health. It provides English ivy, an important source of α-hederin, which has been shown to support surfactant secretion and bronchiole function in preclinical research. Clinical trials have also demonstrated the beneficial effects of English ivy on supporting respiratory function in both adults and children. A mucilaginous herb, marshmallow contains polysaccharides that coat the mucosal lining of the respiratory tract. Clinical research supports its traditional use as a demulcent, promoting oropharyngeal mucosal health and providing soothing comfort to the airway. English Ivy Syrup also includes European elder, an herb well-recognized for its high anthocyanin content. European elder is traditionally used to help maintain a healthy immune system, providing specific support to the upper respiratory tract. Available in a delicious natural raspberry flavor, English Ivy Syrup is a convenient way of supporting upper respiratory function and mucosal comfort in both adults and children.‡

Oregano Oil
Carvacrol formula for antioxidant support‡
- Promotes healthy microbial balance‡
- Provides 25 mg of oregano oil per day
- Includes 20 mg of carvacrol per day

Oregano Oil provides carvacrol, one of the primary bioactive compounds in oregano. In addition to its antioxidant activity, carvacrol promotes healthy microbial balance. In vitro research suggests that carvacrol can diffuse through microbial lipid membranes. In a clinical trial involving 13 adults, daily supplementation with oregano oil for six weeks significantly supported healthy microbial balance.‡

Phyto-Gens
Phytotherapy preparation
• Synergistic combination of young shoot and bud extracts

Phytoembryotherapy is a branch of phytotherapy that specifically incorporates plant embryological tissues (buds, young shoots, etc.) containing “plant meristem” cells - undifferentiated, fast dividing cells which contain the plant’s genetic blueprint. These embryonic tissues are rich in beneficial phytochemicals including: growth factors and plant hormones, enzymes, nucleic acids, oligoelements, and phytonutrients such as polyphenols and flavonoids. Embryological tissues are utilized because many phytochemicals are lost in fully developed plants once chlorophyll is formed. Additionally, their energetic components are at their highest levels when they are harvested in the spring – the most active phase of the growth cycle.‡
